INNOVATIVE SURFACES

fabrics – structure – nature

“INVISION“ stands for high optical values similar to our product line “laminated”, but offers a wider range of processing possibilities by use of innovative composite materials.

Our special rolling technique is capable to link the versatile material PETG with decor elements and creates high quality panels that meet all your requirements and can also be produced according to your own designs.

You can choose between seven different surface structures, even front- or backside can alter.

All Invision products with surface structures “standard classic” and “high gloss” are now also available with a printed front- or backside.

Outstanding visual effects are also obtained by using a white background sheet (made out of white or opal PETG material) for all our Invision items.

material properties

material	extruded PETG (Polyethylenterephthalat Glycol)
embedded materials	fabrics, organic materials, light-emitting diodes (LED), expanded metal
range of temperature application	permanent service temperature up to 70° C
resistance to UV radiation	available on request
forming	cold bending and thermoforming possible, depending on the embedded material
fire protection	depending on embedded material EU-category B1 or B2
miscellaneous	<ul style="list-style-type: none"> • surface impact proof • high chemical resistance • food safe (except for the version containing UV protection) • suitable for all conventional plastic processing technologies

available sizes

dimensions	1200 mm x 2000 mm
	1200 mm x 2400 mm
	1450 mm x 3000 mm
	1950 mm x 3000 mm
thickness	3/4/6/8/10/12/16/20/24 mm,
	further thicknesses on demand
